

*Extract of the
general catalogue,*

CHAPTER A

INDIVIDUAL SOLUTIONS FROM A SINGLE SOURCE

*A large variety of products and systems for
warehouses, factories and workshops*

GENERAL CATALOGUE

Variety without limitations:

Applications for SSI SCHAEFER containers

The extensive SSI SCHAEFER range of storage, order picking and transport containers includes more than 2000 different types, models and sizes.

All these developments are a result of countless actual industrial applications: This means safety to

you, because the extensive practical use proves better than any test. You can be absolutely certain that the model and material quality of every type will stand up to our promises.

Make use of the SSI SCHAEFER expertise, because we know everything about containers.

The pictogram explanations:

The container has been manufactured to Euro dimensions.

Made from recyclable materials.

Made from polyethylene.

Made from polypropylene.

Made from polystyrene.

Prepared coding, e.g. with bar-codes.

Made from conductive polypropylene, suitable for use in the electronics or chemical industries.

To save space, they are foldable for transport when empty.

With handles for manual handling.

Optimised for use on conveyors.

Suitable for mini-load lifting technology.

Suitable for mini-load gripping technology.

Suitable for mini-load pulling technology.

By rotating them through 180°, the containers can be stacked and nested.

General notes on measurements given in this section of the catalogue:

All SSI SCHAEFER plastic containers are manufactured within the moulded plastic parts tolerance according to DIN 16 901.

Semi-open front storage – the practical solution

SSI SCHAEFER containers are designed in such a way that they can be integrated easily into all shelving systems. The complementary sizes enable them to be used in any combination within shelf units, independent from the application.

Regardless of whether the installation is high-bay, multi-tier or fully automated small part storage, SSI SCHAEFER containers provide the perfect storage solution.

► Polypropylene

resistant to most oils, acids and alkalis, noise absorbent on conveyors, when used correctly, retains its stability at temperatures from -20° to +100° Celsius

► Polyethylene

resistant to most acids and alkalis, shock and impact resistant, absolutely harmless to foodstuffs, when used correctly, retains its stability at temperatures between -40° and +80° Celsius

► Robust and stable design

► Smooth internal walls

for easy cleaning

► Recessed handgrip on the back panel

for secure manual transport

► Flexible due to divider options

► Stacking lugs

for secure stacking

► Stackable

with 14/7 series made from plastic and steel, with 14/6 series made from plastic and steel

► Extensive accessory range

for individual container design

Stackable transport containers – individual warehouse usage

The 14/6 series stackable transport containers in sheet steel or plastic are particularly suitable for in-plant transport and shipping and are compatible with all SSI SCHAEFER shelving systems. Very versatile warehouse usage due to a large range of different sizes.

14/6 series made from plastic is compatible with the 14/6 series steel containers and with 14/7 series made of steel and plastic.

For “heavy products” with a max. load of 250 kg – the steel type is to be used.

Full-height walls enable maximum storage potential. The strong stacking rim and base edge means that it can be securely stacked during in-plant and external transport.

The stacking proportions

► **Polypropylene**

resistant to most oils, acids and alkalis, noise absorbent on conveyors, when used correctly, retains its stability at temperatures from -20° to +100° Celsius

► **Polyethylene**

resistant to most acids and alkalis, when used correctly, retains its stability at temperatures between -40° and +80° Celsius, the base material is suitable for use with foodstuffs

► **Robust and stable design**► **Smooth internal walls**

for easy cleaning

► **Recessed hand grip on both ends**

for secure manual transport

► **Stackable**

with LF series made from plastic, 14/7 series made from plastic and steel, 14/6 series made from steel

► **Conductive polypropylene (PPL)**

Custom-made perforated containers for 14/6 and 14/7 series made from sheet steel

Advantages of the tubular-profiled stacking rim

The tubular-profiled stacking rim has a triple layered steel thickness which makes the container extremely impact-resistant. A further model is the container with folded stacking rim (double thickness).

The rim perforations on the underside ensure that cleaning agents and chemicals drain off immediately after the cleaning process and are not carried off. This ensures that the valid regulations of the 2nd Air Pollution act are fully adhered to.

Folded stacking rim

Overview for containers with Euro dimensions

Efficient supply, storage and distribution with the extensive range of SSI SCHAEFER Euro containers. All containers are sized to fit Euro pallets, whether as transport containers

or for semi-automatic or fully-automatic storage systems. SSI SCHAEFER containers with Euro dimensions are used throughout all sectors.

EF series

EF series – container for manual and automatic handling

EF Euro-Fix containers

Efficient supply, storage and distribution are guaranteed by using the extensive EF series by SSI SCHAEFER. They come in 25 different sizes and 150 types. Sturdy stacking rims ensure that the containers can be securely stacked with a stacking load of up to 600 kg, independent of the area of use.

EF containers are also available in a conductive version and in special types.

 Closed  Perforated

- **Polypropylene**
resistant to most oils, acids and alkalis, noise absorbent on conveyors, when used correctly, retains its stability at temperatures from -20° to +100° Celsius
- **Robust and stable design**
- **Smooth internal walls**
for easy cleaning
- **Sturdy stacking rims**
for secure stacking of up to 600 kg stacking load
- **Optimal ribbing**
for secure storage and transport
- **Compatible**
with all Euro containers
- **Flexibility**
in 25 sizes and over 150 types

	Normal PE/PP	PPL
Specific volume resistance	10 ¹⁸ Ohm x cm <	10 ³ Ohm x cm
Specific surface resistance	10 ¹⁴ Ohm	10 ⁴ Ohm

PPL BLACK

EF series with reinforced base

Some containers are available for extremely heavy loads with reinforced and ribbed bases: max. load 50 kg.

Strong rugged containers are a must for heavy loads within an automated small parts operation.

Not always in stock. Please request.

EF series – standard

Smooth standard base
(max. load 20 kg)

Reinforced base VB-S5 type
with rounded corners particularly
quiet for running on conveyors
(max. load 50 kg)

Special base

EF series – special

Special Euro-Fix containers

Opening in sides or ends in solid and mesh-type Euro-Fix containers, as well as combinations of various openings are available as Euro-Fix types. Because these are special types, they are not always available ex-stock (please request).

Special EF containers with the same advantages as the standard EF containers, but with the following additional features:

- ▶ **Semi-open, 3/4 open or max. opening of front or side walls**
- ▶ **Front or side walls** completely open to base
- ▶ **Perforated front walls**
- ▶ **Open front optional for flap**
- ▶ **Recessed or cup-shaped bevelled hand grip**
- ▶ **Reduced indentation**
- ▶ **Special label holder**
- ▶ **Base dimensions:**
400 x 300 mm / 600 x 400 mm /
800 x 600 mm

Special EF containers – Base dimensions of 400 x 300 mm

MF series – the professionals for automated handling and manufacturing

Multifunctional container MF series

The multifunctional container in MF series have grown to meet all the tasks of automatic storage and production and as multi-use packaging in external goods transport. Some of the advantages are the double layered all-round base with optimum running properties at high loads, the comb-like ribbing of the sub-floor ensures good contact on all conveyors and the patented, open-ribbed drainage channels under the base rim prevents the container from catching.

Standard base for and trouble-free and safe storage in the mini-load system (max. load 35 kg)

LTB series – light but strong for transport and storage

Storage and transport containers LTB

The LTB by SSI SCHAEFER offers particularly high volume utilization, a reinforced lower and upper rim as well as four sturdy corner posts.

The specially designed base variants ensure trouble-free running on all conveyors. These features guarantee a high resistance to twisting and secure stacking. Its weight and its strengthened standard base make max. loads of up to 50 kg possible and in the variant with vibration welded base (VS01) can take a max. load of 70 kg.

The LTB is, apart from the open standard model also available with a hinged lid (in one or two parts) or separate top cover. With the usage of the top cover or the hinged lid the LTB is ready for shipment and retains the ability for automated unstacking and secure storage in mini-load and modular shelving systems.

The SSI SCHAEFER LTB storage and transport container is a further component for the constantly automated material flow.

LTF series – container for automatic handling

LTF series containers

The different base versions of the storage and transport container series (LTF) enable loads, according to model, of up to 70 kg.

Perpendicular sides optimise internal dimensions. Specially-designed corner posts facilitate high stacking loads and easy cleaning.

VDA label holders, barcode panels, vertical lifting slots and centering holes, as well as a transponder mount are included. Water drainage holes according to VDS classification directive BG 4.3 and various types of hand grips are also available.

The LTF series is compatible with VDA system elements (e.g. A 1208, see KLT).

Slot for lid hinge, compatible with MF series

Lid sealing holes compatible with MF series

Lifting slots for vertical retrieval, compatible with series MF

Double-walled corner frames for high load stacking

Mounting for label fastening wire (front/sides)

Fixing area for check card transponder (front/sides)

Stable impact surface for use in mini-load system (front/sides), rounded edges, advantageous on conveyors

Large areas for adhesion and hot-embossing

Centering holes

Label field with integrated barcode strip (front/sides)

Standard base
(max. load 25 kg)

VB 01 base
Reinforced, diagonal ribbed base for high loads (50 kg)

VB 02 base
Reinforced, diagonally ribbed base with additional surrounding collar for optimal running properties and high loads (50 kg)

VS 01 base
Reinforced welded base with batter for optimal running properties and high loads (70 kg)

LTS series – heavy-duty container in automated systems

LTS series

The LTS storage and transport container system is ergonomically designed for optimum handling. Stackable and codable, the moulded barcode position is always located in the same place on the container or tray, whatever the container size, to ensure optimal steering. All necessary information can be placed in the card holder.

All LTS containers are designed to stack securely on 1200 x 800 and 1200 x 1000 mm pallets. Suitable for grip/pull and lifting technology in mini-load systems.

The ribbed base, all around buffer edge and sturdy corner frames ensure smooth running on all types of conveyors.

Standard base
(max. load 50 kg)

LTS container

Item	Interior dim. when stacked L x W x useable height (mm)	Finish	Capacity (litre)	Order no.
LTS-K 314	233 x 157 x 125,5		4,6	37284

Accessories for LTS series

- ▶ **Polypropylene**
resistant to most oils, acids and alkalis, noise absorbent on conveyors, when used correctly, retains its stability at temperatures from -20° to +100° Celsius
- ▶ **Robust and stable design**
- ▶ **Fully recyclable**
- ▶ **Reinforced base**
for trouble-free and secure storage in mini-load systems and high max. loads
- ▶ **Stable corner posts**
for high stacking loads
- ▶ **Smooth internal walls**
for easy cleaning
- ▶ **Compatible**
with all Euro size containers
- ▶ **Water drainage holes in the base**
can be supplied acc. to VDS classification directive BG 4.3.
- ▶ **Conductive models**
available on request

Lid

The lid fits securely into the stacking rim of the LTS container protecting the contents from dust. An indentation of 15 mm ensures secure stacking of further containers on top of the container with the lid in place.

Material: Grey polystyrene.

Item	For containers	Order no.
LTS-D 3	LTS-K 314	37315
LTS-D 4	LTS-K 414	37305
LTS-D 6	LTS-K 614, LTS-K 628	37295

Insert bases

With grip holes. May be used to separate fragile products stacked on top of each other in the container.

Material: Grey polystyrene.

Item	For containers	Dim. L x W (mm)	Order no.
LTS-Z 3	LTS-K 314	231,5 x 155,5	37345

Accessories for LTS series

LTS trays

For transporting LTS containers. Two LTS-K 414 or four LTS-K 314 containers may be located on a single tray. On the tray LTS, KLT and Euro-Fix containers can be stacked together for secure transport.

Item	Model	Dim. L x W x H (mm)	Order no.
LTS-T6 G	Smooth surface	594 x 396 x 50	37224
LTS-T6 G Z	Smooth surface and front grip groove for mini-load systems	594 x 396 x 50	37244
LTS-T6	With centering nut	594 x 396 x 50	37214
LTS-T6 Z	With centering nut and front grip groove for mini-load systems	594 x 396 x 50	37234

LTS-TR

With smooth upper surface and diamond shaped base for quiet running on conveyors and grip groove at the front.

Item	Dim. L x W x H (mm)	Order no.
LTS-TR	627 x 396 x 50	37194

Pallet LTS-P 815

These polypropylene pallets are ideally suited for carrying heavy loads. The handling of stacked pallets in racking can be done manually or by automated aisle stacker crane with telescope or fixed forks.

The LTS pallet can be used in combination with MF, LTF, LTS, KLT and Euro-Fix containers. Pallets can be easily stacked when empty or full.

Longitudinal runners on the base make the LTS pallet ideal for use with roller tracks, link conveyors, lifting platforms etc.

Item	Load (kg)	Dim. L x W x H (mm)	Order no.
LTS-P 815	250	800 x 600 x 150	37200

► Polypropylene

resistant to most oils, acids and alkalis, when used correctly, retains its stability at temperatures from -20° to +100° Celsius

► Can be combined in 4 sizes

with Euro containers with base dimensions of
300 x 200, 400 x 300 and 600 x 400 mm

► Robust and stable design

► Smooth interior walls

for easy cleaning

► Water drain holes

Conductive printofix holders

Can be used in conjunction with conductive semi-open front, transport stacking and Euro-Fix containers or on its own. Available in two sizes, made from conductive polypropylene or white, non-conductive plastic.

For containers 14/7-2, 2 H, 2 Z and 14/6-2, 2 H, 2 Z.

Dimensions: L 275 x W 206 x H 93 mm

Item	Finish	Order no.
LPL 1	Conductive, with discharge socket	22410
LPW 1	Non-conductive, white	22400

For EF containers L 600 x W 400 mm.

Dimensions: L 355 x W 265 x H 130 mm

Item	Finish	Order no.
LPL 2	Conductive	22430
LPW 2	Non-conductive, white	22420

Printofix boards

For EF containers L 400 x W 300 (1 board) and L 600 x W 400 mm (2 boards). With grip openings for easier handling. For conductive holders of up to 552 mm length.

Dimensions: L 355 x W 248 x H 13 mm.

Item	Order no.
LP 2	22440

Printofix trays

For EF containers L 400 x W 300 and L 600 x W 400 mm. The illustrated trays are standard models.

Special trays can be made on request to suit individual requirements.

Printofix trays can be stacked when empty and full.

Vario Frames – conductive container inserts

Complete frames

Height 114 mm, for base dimension 400 x 300 mm, consisting of:

Item	Alignment of circuit boards	2 side sections L (mm)	1 centre section L (mm)	2 connection profiles L (mm)	Order no.
Vario 919	Longitudinal	253	—	353	171658

Vario 926	Lateral	553	—	353	171718
Vario 903	Lateral	553	553	353	171728

Versatile, electro-conductive container inserts for Euro containers of various dimensions. Container inserts or self-contained circuit board magazines of any dimension, up to magazines for automatic systems, are available in smaller quantities.

Vario Frames guarantee safe storage and transport of electronic parts in Euro containers. The special design of the Vario Frame enables container inserts to be supplied in any dimension in a 10 mm grid and slide-in trays in increments of 105 mm to be supplied.

Side sections

Height 114 mm, push-in depth 108 mm, wall thickness 6 mm.

Pyramid tray, SMD coil box and push-in partitioning

Pyramid trays

For EF containers with base dimension of 600 x 400 mm. Suitable for storing, transporting and assembling PCB's and semi-conductors. Semi-conductors can be placed anywhere on the tray. The surface provides gentle protection to the bottom of the circuit boards and semi-conductors.

Item	External dim. L x W x H (mm)	Order no.
TTE 048	548 x 345 x 22	22388

SMD Coil box

Special boxes for optimal handling and secure storage of SMD coils in ESD areas. The self-supporting design provides for secure coil storage without tilting during transport or storage. The dimensions are optimally coordinated to fit modular shelving systems and on-line shelving as well as for PICKOMAT®.

Conductive polystyrene, black.

Item	External dim. L x W x H (mm)	Max. number of coils	Order no.
SMD 621	600 x 188 x 110	36 (Ø 180 mm)	38778
SMD 642	600 x 350 x 178	36 (Ø 330 mm)	38788

SMD 621

SMD Coil box for Euro size container (no illustr.)

Item	External dim. L x W x H (mm)	Max. number of coils	Order no.
SMD 642 K	540 x 350 x 178	32 (Ø 180 mm)	38768

SMD 642

Dividers (no illustr.)

Item	Dim. L x W x H (mm)	Order no.
SMD-T 621	175 x 130 x 2	38758
SMD-T 642	430 x 195 x 2	38748

Push-in partitioning

A relatively simple and inexpensive way of providing divisions of equal or different sizes, in conductive Euro-Fix containers, by using slotted dividers of conductive polystyrene. Alternatively made from non-conductive materials on request.

The smallest achievable compartment size is 18 x 18 mm, this can be expanded to each side in 20 mm increments as often as required: i.e. to 38 x 18 mm, 38 x 38 mm, 58 x 18 mm, 58 x 38 mm, 78 x 58 mm, etc.

Item	For containers L x W (mm)	Crosswise divider W x H (mm)	Lengthwise divider L x H (mm)	Order no.

KLT container system – Material flow conforming to VDA standard

KLT series – mini-load container

The KLT mini-load container represents a standard container for both manual and automated handling. These are used as special containers for material flow conforming to the VDA standard in the car industry, for component transport between car manufacturers and tiered suppliers.

KLT containers are especially suitable for:

- automated parts picking from the container and positioning of empty stacks,
- horizontal and vertical handling by means of KLT grooves and slots,
- gripping technology facilitated by 2 grooves on the longitudinal sides,
- use in mini-load systems, thanks to grip grooves on front and sides.

All containers are designed to be stackable on 1200 x 1000 and 1200 x 800 mm pallets. The base ribbing and stacking feet guarantee the container stability and prevent it from tipping over.

Beyond that, they offer favorable conditions with regard to cleaning and fire resistance due to their double-wall construction. The R -, RL- and foldable KLT series are optionally available with water drainage holes in the base.

► Polypropylene

resistant to most oils, acids and alkalis, quiet running on conveyors, when used correctly, retains its stability at temperatures from -20° to +100° Celsius

► Robust and stable design

► Fully recyclable

► Ergonomic hand grips

► Lifting slots for automatic handling

► Optimised effective volume

► Smooth internal walls

for easy cleaning

► Compatible

with all Euro dimension containers and KLT models

► VDA standard 4500

Vibration welded base (VS01/VS02 base – max. load 70 kg)

Card holder on front and sides

Ergonomic hand grip at the front

Sturdy corner ribbing

L-KLT series

L-KLT with smooth base, water drainage holes optional

Storage and transport containers – foldable and collapsible

The high requirements of the current packing regulations are asking for multi use transport containers, which contribute substantially to the avoidance of packaging waste. Depending upon type of box, the container volume is being reduced by approx. 80% on empty return trips.

All of SSI SCHAEFER's foldable plastic containers are compatible with Europallet dimensions.

The FK boxes have a fixed, strong upper edge which guarantees rigidity and safe stacking, even if used without a lid.

The collapsible type, which can only be used with a lid, is an economical alternative to the foldable type for shipping light goods. All FK boxes can also be used to transport food stuffs.

Space saving stack and nest containers

Nesting storage and transport containers provide economical solutions and multiple uses for returnable packaging and order picking applications.

The three basic options for volume reduction in containers with rigid outer walls are:

- ▶ Stack and nest containers with bail arms – can be stacked inside each other or on top of each other by turning the bail arms by 180° (see KMB with bail arms).
- ▶ Stack and nest containers – can be stacked full with or without a lid and stacked inside each other by rotating 180°.
- ▶ Stack and nest containers which can only be stacked with a lid or nested empty inside each other without a lid.

Stack and nest containers FB-K 1354

Containers FB-K 1354

The FB-K stack and nest container has been especially developed for transporting cable harnesses.

The containers can be stacked inside one another when empty to save space, and by turning them 180°, the filled containers can be stacked on top of one another, even without lids. This provides excellent space-saving opportunities of 75% for stockpiling and for the return transport of empty containers.

The container is VDZ-tested (transport and load capacity test).

Indentation when stacked: 28 mm
Nest height: 85 mm

Load: 40 kg
Static load: 450 kg
Dynamic load: 300 kg

Ribbed base with tread for mini-load applications

Individual and special solutions made from plastic

Special applications demand the use of special plastic containers. SSI SCHAEFER has developed and customised a wide range of special containers according to customer requirements.

If you need a special container to suit your needs, our development team would be pleased to help you find the perfect solution.

FK box serie**

Bespoke packaging

Bespoke packaging consists of two parts: a container in Euro dimensions and an individual customised insert. Each container is fitted with an insert in order to achieve optimum transport and storage conditions. This insert is customised to match the contours of the packaged goods. As a result, items are protected against possible damage.

Inserts come in a choice of vacuum-formed, foam or fabricated sets.

We will be happy to advise you regarding the options that are available and create layouts, drawings or samples.

MF container 6070 with vacuum-formed insert made from conductive ESD material

Vacuum-formed inserts

Container inserts are essential if packaged goods have to be kept in place during transport and storage.

Vacuum-formed inserts offer the ideal solution. They adjust to the contours of the product thereby protecting it from breakage and surface damage. Vacuum-formed inserts can be used for large or small parts; either way the tooling costs for vacuum forming are comparably low.

Materials and designs:

Panel blanks in ABS, PS, PP, PE, PMMA, PC. Depending on type also available in electrically conductive materials, as multi-layered inserts, or low-cost recycled materials.

Dimensions:

Available in cut-out sizes from 333 x 333 mm to 2500 x 1500 mm (L x W). Sheet thicknesses from 1 to 10 mm. Max. drawing depth 800 mm.

Inserts also available in colour or ...

... as fabricated inserts

Vacuum-formed insert with three different components (ESD version)

Vacuum-formed insert with precise positioning of turning parts

Bespoke packaging

EPP foam inserts

Delicate goods require special protection. Packaging inserts made of EPP foam are ideal for meeting these stringent requirements.

Foam inserts offer an exceptionally long service life, are resistant to oil and alkalis, and are easy to clean. Foam inserts can be produced particularly economically in virtually any shape for many different types of packaging applications in medium-sized and large batch sizes.

Materials and designs:

EPP foam. Standard colour: Black.
Other colours available for larger quantities.
EPP foams suitable for Electrostatic Discharge (ESD) applications are available on request.

Dimensions:

Sizes available up to
1700 x 1000 mm (L x W).
Heights up to 400 mm.

Bespoke packaging

Bespoke inserts

Small or medium-sized production quantities do not necessarily have to involve high packaging costs. By using bespoke inserts it is possible to produce a universal packaging design that is suitable for many different shaped items that only need to be centred rather than fixed. The insert components are modular and divide the container into sections. This reduces packaging costs but still offers a tailored solution.

Materials and designs:

Bespoke inserts can be manufactured in almost any shape and from almost any material. Alternatives include foam dividers, routed foam inserts or corrugated cardboard. The materials are also available in antistatic or ESD-protected versions.

Dimensions:

Bespoke inserts offer a variety of divider options for each container. Almost any measurement can be achieved. The inserts can be manufactured with densities from 15 to 200 g/m³.

LTB container with routed foam insert for returnable packaging

EF container with dedicated push-in foam dividers

Routed foam insert

Made-to-measure foam insert for the automobile supply sector in the EF container

Fabricated inserts

As well as their applications in manual handling, the fabricated inserts are ideal for customers who have a high degree of automation in place. They are used primarily in production sites with automatic parts picking and in material flow systems in industries supplying the automobile sector. The custom containers are produced based on the container system KLT conforming to the VDA standard.

It provides a protective housing for workpieces and is used both for orderly provision in production and as a protective container for handling and transport.

Fabricated insert with extruded centring points

Fabricated inserts

A special feature of the fabricated insert is that the container and inlay form one unit. The key feature is the centring unit modified for the exact contours of the customised product.

The advantages of the new special containers are: Maximum positioning accuracy of the products; avoids transport and storage damage; saves the costs of single-use packaging and missing parts are detected at a glance.

Lifting slots and centring holes support the horizontal and vertical grips with automatic devices and robots. The vertical walls of the fabricated insert with the relevant ribbing provide the necessary level of stability. The base guarantees error-free running on all conveyors.

Material:

ABS and PP

Dimensions:

400 x 300 mm, 400 x 400 mm, 600 x 400 mm and 800 x 600 mm (L x W).

Mirror-welded containers

Due to their size and shape, some components require packaging in special sized containers and cannot be housed in standard containers with Euro dimensions. The products are either too large or too small.

Double-welded
EF container, with
routed slots in the base

Request our “Bespoke packaging” brochure

Mirror-welded containers

Mirror-welded containers are – depending on the special size required – separated out from segments of the basic container or multiple containers are joined using mirror welding to create a new container.

In normal applications, welded containers offer the same load capacity as standard containers. The stability of the weld seam is approx. 90 % of the container's original material strength. This also applies when using ESD materials. Despite the weld seam, the container offers the same functions in terms of stability, stackability, durability and for use in automated systems.

Materials and designs: PP, PE
Also available in for Electrostatic Discharge (ESD).

Dimensions:

The usable inner dimensions and necessary loads are calculated based on the customer's requirements.

Identification options for boxes and containers

All of the containers may be stamped with numbers, codes or your company name and logo – an individual service from SSI SCHAEFER.

Hot stamping

With standard letters (10 or 24 mm high) or your company logo. In addition, the containers can have up to 6 digit numbers in 11, 19 or 30 mm height.

Please request further information on minimum quantities and prices for containers for hot stamping.

Die-forming

With stamping tools, the company name or logo can be incorporated within the container as it is being produced. Only available in container colour.

Please request further information on minimum quantities and prices for containers for mould stamping.

Silk screen printing

Silk screen printing is another way in which containers can be identified with their company name or logo.

Please request further information on minimum quantities and prices for containers with screen stamping.

for easy cleaning

Bulk containers

Bulk containers KB, KBR and KBF

Moulded form made from solid polyethylene. Completely smooth interior surfaces. The containers can be stacked on top of one another. The containers are stackable with specially designed feet to prevent slipping. The sturdy base is raised to provide access for fork-lift trucks – also available with castors.

Standard colour: grey.

These large containers are ideal for textile companies, laundries, dry cleaning companies, the food industry and wholesalers.

KBF 9

Solid sides and base, with 4 feet 80 mm high for access on fork lift trucks.

External dim.: L 1000 x W 630 x H 660 mm
Internal dim.: L 925 x W 570 x H 505 mm
Capacity: 280 l
Individual load: 300 kg
Load when stacked: 1500 kg

Item	Order no.
KBF 9	16810

Foldable bulk containers and plastic pallets

FKB foldable bulk containers

Lightweight, secure, stable, stackable, with large drop gate and space-saving turn/push lid. Environmentally-friendly container in Euro dimensions, can be folded to a third of the size for return trip and storage, can be picked up using a forklift from any side.

Drop gate for easy loading and unloading, individual parts easy to replace, but are secured tightly for return transport. On request, can also be locked and sealed to protect against theft.

The container is the ideal design for transporting small parts. Use as a bulk material container is also possible, but this is dependent on the density of the bulk material. Suitability for specific applications should be checked by the user.

FKB 12:

External dimensions when folded: L 1200 x W 800 x H 330 mm

Empty weight: 40 kg

Max. payload: 500 kg

Material: Polypropylene, grey

FKB 08:

External dimensions when folded up: L 800 x W 600 x H 387 mm

Empty weight: Approx. 25 kg

Max. payload: 300 kg

Material: Black polyethylene, grey polypropylene

Pallet LTS-P 815

These polypropylene pallets are ideally suited for carrying heavy loads. The stacked pallets can be handled by manual or automated aisle stacker crane with telescope or fixed forks. The LTS pallet can be used in combination with MF, LTF, LTS, KLT and Euro-Fix containers. Pallets can be easily stacked when empty or full.

Longitudinal runners on the base make the LTS pallet ideal for use with roller tracks, link conveyors, lifting platforms etc.

Material: Polypropylene, yellow.

Item	External dim. L x W x H (mm)	Load (kg)	Order no.
LTS-P 815	800 x 600 x 150	250	37200

The raised outer edge of the pallet prevents items from sliding off

Accessible by forklift from all sides

Two label holders are located along one side. On the other side, there is another label holder as well as a holder for electronic control tabs

Grip groove for mini-load system

Plastic pallets

With 3 lengthwise skids, compatible with plastic containers in Euro dimensions.

Low weight and low structural height makes these pallets suitable for multi-way transport.

Load: dynamic 850 kg.

Material: Recycled PE, black.

Pallet version for racking on request.

Hazardous goods containers

Containers permitted and certified for dangerous good transport

These hazardous goods containers have been tested and approved by the Belgian Packaging Institute in accordance with the GGSVE/ADR regulations on the transport of hazardous goods, as external packaging for hazardous goods, in packaging groups I, II and III (only in combination with lid and banding and/or with a strap or retaining springs integrated into the lid).

They conform to the recommendations from the United Nations (UN), the Ordinance for the International Railway Transportation of Hazardous Goods (RID), the International Agreement on Sea Transportation (IMDG code) and the European Agreement on the International Transport of Hazardous Good by Road (ADR Agreement).

They also conform to the international hazardous goods regulations for road (GGVS), rail (GGVE) and sea (GGV Sea) and are certified accordingly.

On request we develop and manufacture cost-effective hazardous goods containers to special dimensions according to your individual requirements.

Please contact our technical adviser.

When ordering, please specify that you require the relevant certification for the containers.

Hazardous goods heavy load containers

Bulk hazardous goods carriers are used to transport and store explosive substances. They are used for safety devices and human restraint systems in vehicles, for example.

It goes without saying that SSI SCHAEFER bulk hazardous goods carriers meet all the applicable regulations of all laws pertaining to the transport of hazardous goods. They have passed drop testing and fire testing by recognised test institutes and are certified according to the German regulations on the transport of hazardous goods via road or rail.

Transport and stacking containers

Transport and stacking containers for all heavy goods, solid materials, castings and forgings. The sidewalls are formed into tubular sections at the top edge with rib-type reinforcement. Continuous ribbing, strong base, stable feet and particularly strong lifting corners with crane lugs are also a feature.

Base thickness: 2 mm
Forklift ground clearance: 100 mm

Item	Nominal measurements L x W x H (mm)	External dim. L x W x H (mm)	Drive-in width (mm)	Wall- thickness (mm)	Load (kg)	Stack load	Order no.	Item	Order no.

Stacking container SG

Robust, sturdy containers with fork pockets and extra wide corner lifting lugs.

A mesh type is also available for holding hot components.

Base thickness: 2 mm
Forklift ground clearance: 150 mm (SG 1216-I+v and SG 1286-I+v), 120 mm (SG 1086-I+v)

Lager-Fix containers, mesh box pallets

Lager-Fix containers

The design and shape of this type of container corresponds to the other Lager-Fix containers. A particular advantage is the large viewing and access opening which is still exposed even when stacked. This is why these containers are also used to convey materials to the production line.

The stacking rim on the three sides enables up to 6 units to be safely stacked. Mixed stacking of different sizes is possible. The corner angle sections and strong pressed steel sides guarantee high load bearing capacity. Base thickness 2 mm, forklift ground clearance 100 mm.

Item	Nominal measurements L x W x H (mm)	External dim. L x W x H (mm)	Drive-in width (mm)	Wall- thickness (mm)	Load (kg)	Stack load	Order no.	Item	Order no.

Mesh box pallet, half height

This can be stacked with the European exchange pallet according to DIN 15 155 standards.

Contained load capacity 1000 kg, 5 loaded pallets can be stacked. The feet and stacking frame are in accordance with the exchange pallet DIN 15 155 standards. One sidewall can be folded down completely and the base can be either ribbed steel or wood as required.

Item	Nominal measurements L x W x H (mm)	External dim. L x W x H (mm)	Drive-in width (mm)	Load (kg)	Stack load	Base finish	Order no.	Item	Order no.

Mesh box pallet

European exchange pallet (acc. to DIN 15 155). The frame consists of angle steel section (DIN 1029) and the sides are of electrically-welded 50 x 50 x 4.6 mm structural steel mesh. All intersections are spot welded. The top half of one side is a hinged loading flap which rotates through 180° around a welded bar and is secured to the corner posts by spring-loaded catches.

Different colours are available on request.

Item	Nominal measurements L x W x H (mm)	External dim. L x W x H (mm)	Volume (m³)	Lift- height (mm)	Angle- thickness (mm)	Load (kg)	Stack load	Order no.

Mesh containers, post pallets, flat steel pallets

Mesh pallets

Angle-steel framework. Welded structural steel mesh sides 50 x 50 x 4 mm. All intersections are spot welded. The base is available either as sheet steel or in 25 mm strong wooden boards. Forklift ground clearance 105 mm, forklift entry width 800 x 720 mm, angle section sides 40/40/4 mm. Load capacity 1000 kg; six loaded pallets can be stacked.

Also available with base dimensions 1200 x 800 mm and also with Pool mesh box feet for order quantities in excess of 100 units.

Item	Nominal measurements L x W x H (mm)	External dim. L x W x H (mm)	Finish	Order no.	Item	Order no.

Post pallets

Large production and assembly components which exceed a fixed container volume can be openly stored and easily transported. Holders made from 50 x 50 x 3 mm rectangular tubing with welded stacking corners. The base frame is made from U 80 profile. The base is strongly reinforced by ribbing.

Item	Nominal measurements L x W x H (mm)	External dim. L x W x H (mm)	Lift- height (mm)	Load (kg)	Stack load	Order no.

Individual and special solutions made from sheet steel

Extremely robust special pallets are used for the in-house movement and the automatic supply of steel sheet billets to presses. The load capacities are up to 5000 kg.

Here, too, SSI SCHAEFER is setting the standard: The advanced production technology permits the manufacture of these load carriers with the narrowest of manufacturing tolerances which are required by the automatic supply system.

Large-volume bodywork parts are transported, stored and conveyed to the assembly belt using racks. Special frames are used when it comes to the transport and storage of sensitive components, such as engines and gear parts.
