

PROJECT

ACS Courier

STORAGE SYSTEMS

Shaping Future Warehouses

Due to a limited storage space and the need for a rack to combine easy picking and storage **PEBRO** designed a combined Long Span rack according to the specific need of **ACS Courier**.

Solution:

PEBRO's Long Span racking system opted by the company as it was ideal for storing boxes that corresponded to the position of the sorter.

The Long Span shelving gave a high degree of flexibility with different shelf depths on the same bay, different widths and even heights; while the inclination of the front upright gave the possibility of easy picking and on the same time the straight shelf gave the proper storage space for products with the same code.
